Hi Stan -- as discussed, we'll review this quickly so that we can be in the field in January.

For some reason, I can't accept the meeting invite you sent. It says there is an error of some sort, not sure if this happened to everyone. Could you re-send it, at least to me (I can't even see the call in details)?

Thanks, and Happy Holidays if I don't speak with you this week!

Stephanie

Subject: Draft QAPP Addendum D

Stephanie,

As we discussed this morning, attached are copies of the draft QAPP Addendum D which were just uploaded to the EPA SharePoint site. There was a lively discussion around this during our call, but as a reminder, we believe that we have crafted a conservative active layer design for the cap, so the purpose of this new sampling and analysis program is simply to:
confirm appropriateness of active layer design assumptions by measuring pore water COPC concentrations, and
increase TCLP data density to support final disposal decisions.
Should the data obtained via this QAPP indicate that our design assumptions are overly conservative, we would likely enter into discussions on whether that data in tandem with historical data already collected in the RM 10.9 mudflat is adequate to justify a change in active layer design thickness.

We would like to implement this QAPP in January before icing conditions interfere with boating operations on the Lower Passaic River. To support such a fast turnaround, I will schedule a conference call for January 4 to hear and discuss initial comments to this draft QAPP.

It is always a pleasure working with you, Stephanie. Have a great holiday if we don't speak beforehand.

Respectfully,

Stan[attachment "20121214_RM10_9_QAPP_Addendum_D_Rev 0.docx" deleted by Stephanie Vaughn/R2/USEPA/US] [attachment "20121214_RM10_9_QAPP_Addendum_D_Rev 0.pdf" deleted by Stephanie Vaughn/R2/USEPA/US]
